

PA.239.MPC – Fecal Calprotectin Testing

Maryland Physicians Care considers **Fecal Calprotectin Testing** medically necessary for determining the diagnosis of the following:

1. Crohn's Disease
2. Ulcerative Colitis

These conditions are characterized by uncontrolled inflammatory response at the mucosal level causing tissue damage and are typically diagnosed by a physical examination, small bowel x-rays, CT/MRI, resonance enterography, capsule endoscopy, enteroscopy, colonoscopy and/or biopsy.

Limitations/Exclusions

Fecal measurement of calprotectin is unproven and not medically necessary for the diagnosis or management of any other condition.

Background

Due to similar features, it can be difficult to distinguish between inflammatory bowel diseases like Crohn's Disease and Ulcerative Colitis and Irritable Bowel Syndrome. It has been determined that Fecal Calprotectin Testing, which is a non-invasive stool test used to detect inflammation in the intestines, can help to distinguish between these diseases and can aid in predicting a relapse of Crohn's Disease or Ulcerative Colitis.

When Calprotectin is present in elevated levels in the stool (greater than 120.1 mcg/g), it more than likely indicates Crohn Disease or Ulcerative Colitis; whereas if the level is low or normal (less than or equal to 50 mcg/g) it is more indicative of irritable bowel syndrome.

Calprotectin is a calcium-binding protein produced primarily by neutrophils. Fecal Calprotectin Testing employs a quantitative enzyme immunoassay methodology to detect calprotectin in a fecal sample. Testing provides a non-invasive alternative to ileocolonoscopy to monitor disease activity in Crohn's Disease and Ulcerative Colitis. Growing evidence suggests mucosal healing is associated with better patient outcomes and is a cost-effective alternative to ileocolonoscopy, which is invasive, expensive and carries a risk of complications.

PA.239.MPC – Fecal Calprotectin Testing

Policy Number: PA-239.MPC

Last Review Date: 04/06/2021

Effective Date: 06/01/2021

CPT Codes / HCPCS Codes / ICD-10 Codes	
Code	Description
83933	Calprotectin, fecal
