

MP.006.MPC - Continuous Home Pulse Oximetry

Maryland Physicians Care considers **Continuous Home Pulse Oximetry** medically necessary for the following indications:

1. Continuous pulse oximetry performed in the home is covered only when any of the following indications is present:

- Patients on prolonged home mechanical ventilation when the ventilator does not have a built in pulse oximeter, OR
- Home Care patients with tracheostomies, OR
- Premature or infants under one year with bronchopulmonary dysplasia

AND

2. Continuous pulse oximetry performed in the home is covered only when ALL of the following indications are present:

- The recipient would otherwise require hospitalization solely for the purpose of continuous monitoring,
- The results are reliable in that setting,
- The patient's record documents that the oximeter is preset and self-sealed and cannot be adjusted by the patient,
- The device is able to provide a printout which documents an adequate number of sampling hours (a minimum of four hours should be recorded), percent of oxygen saturation and an aggregate of the results (this information must be available if requested), and
- A trained caregiver is available to respond to changes in the oxygen saturation.

Limitations

Continuous pulse oximetry performed in the home is not covered for any of the following indications:

- For routine monitoring of an individual with oxygen (not medically appropriate)
- As part of an individual's asthma management (not medically appropriate)
- For management of chronic obstructive pulmonary disease (COPD)
- For management of transient hypoxemic events
- For screening or management of a sleep disorder (e.g., sleep apnea)

Pulse oximeters can be used just intermittently for a spot check (digital pulse oximeter) or used continuously which is mainly performed in the inpatient care setting.

MP.006.MPC - Continuous Home Pulse Oximetry

Policy Number: MP.006.MPC

Last Review Date: 06/28/2022

Effective Date: 07/01/2022

The oximetry device used is subject to the Food and Drug Administration (FDA) regulations/approval. A complete list may be obtained by inserting product code DQA into the 510(k) approvals database.

Pulse Oximetry is considered experimental and investigational for all other indications, including for the diagnosis of nocturnal hypoventilation.

Maryland Physicians Care does not cover experimental and investigational services.

Background

Pulse oximetry measures oxygen saturation by utilizing selected wavelengths of light to noninvasively determine the saturation of oxyhemoglobin. The oximeter passes red light through the fingertip or earlobe; the amount of light that is absorbed reflects how much oxygen is in the blood. This is done by measuring light absorption of oxygenated hemoglobin and total hemoglobin in arterial blood.

Pulse oximetry is considered a safe procedure but the device does have limitations that can lead to inaccurate measurements, including: motion artifact, abnormal hemoglobins, skin pigmentation, low perfusion states, nail polish and ambient light. These limitations may lead to a false negative and potentially inappropriate treatment of the individual.

Codes:

HCPCS Codes	
Code	Description
A4606	Oxygen probe for use with oximeter device, replacement
E0445	Oximeter device for measuring blood oxygen levels noninvasively
Not Covered ICD-10 Codes	
G47.33	Obstructive sleep apnea (adult) (pediatric)
G47.34	Idiopathic sleep related non-obstructive alveolar hypoventilation
G47.36	Sleep related hypoventilation in conditions classified elsewhere
G47.8	Other sleep disorders
G47.9	Sleep disorder, unspecified
J44.9	Chronic airway obstruction, not elsewhere classified (NEC)
J45.909-J45.998	Asthma
Z13.83	Encounter for screening for respiratory disorder NEC

Variations

Medicare Advantage Products:

Continuous home pulse oximetry will be denied as not a covered benefit.
